

Ariadne Reporting

In our today's business environment solutions saving time, human resources and thus money for corporations are of great importance.

Management highly focuses on time element, user friendly environments and simplicity. These are key factors to contribute on larger scale so as to manage data in a fluent way.

Our latest software development is based on these needs.

ARIADNE REPORTING is a reporting platform that can be integrated into any SQL based business operations system (e.g. Exact Globe, Microsoft Navision, SAP Business One).

The software speeds up and makes reporting easier in many ways, thus enabling more efficiency in satisfying requirements for business information.

Apart from the features expected from a report generation tool, Ariadne Reporting offers the following benefits for the user:

- Runs on the databases of multiple companies (the same report can be run on the databases of several companies without the need to switch to another program)
- Prepared reports (the reports – the parameters of which can be adjusted freely – can be saved with their typical parameter values)
- Simple parameter updating without the need to re-run the report
- Categorisation of reports and expiration date setting
- Exporting to various formats by just one click etc.
- Display of favourite and last run reports
- Sending of reports by email (MS Outlook SMTP, MAPI support)
- Automated update: automated display of new reports

Above all there are numerous additional functions helping users to work more efficiently.
